

## New photovoltaic installation at Trade Logistics

Foullis Group announced the installation and operation of a new photovoltaic system on the roof of its subsidiary Trade Logistics' storage and distribution center in Schimatari, Boeotia. This initiative is part of the Group's commitment to sustainable development and environmental responsibility.

The new photovoltaic system, the second to operate at Trade Logistics' storage and distribution center, will produce approximately 1,415 MWh annually, covering 90% of its energy needs. This installation operates under the net-metering regime, significantly reducing energy transmission losses and carbon dioxide (CO<sub>2</sub>) emissions, thus contributing to environmental protection.

This investment is a significant step towards achieving Foullis Group's sustainability plans and another example of its commitment to promoting and investing in clean and renewable energy sources, while also ensuring significant economic benefits from the utilization of energy from the photovoltaic system.
